SUMMARY

Results-driven and highly motivated software developer with over 3 years of experience in back-end development using Django and Django REST Framework, along with 1 year of experience in Laravel and a foundational understanding of React and front-end technologies. Passionate about building scalable, secure, and maintainable web applications. Adept at working in fast-paced environments, solving complex problems, and continuously learning new tools and technologies. Seeking to grow as a leading developer by leveraging cutting-edge tools and contributing to high-impact software solutions in the ever-evolving tech industry.

SKILLS

- Strong organizational and time-management skills
- Exceptional communication and interpersonal skills
- Ability to work independently and as part of a team
- Detail-oriented and able to handle multiple tasks simultaneously

Technical Skills

- HTML, CSS
- Python
- Django
- Django REST Framework
- Celery (with Django)
- Laravel
- Git
- JavaScript (Basic)
- React (Basic)
- Redis

Databases:

- PostgreSQL
- MySQL

PROJECTS

1: creativecode

2: college-management _system:

- It is designed for interactions between students and teachers
- Features include attendance, marks and time table.

3: Vichle management system

- customer will signup and login into system
- mechanic will apply for job by providing details
- mechanic can see salary and how many vehicles he/she have repaired so far
- customer and mechanic can send feedback to admin

4:Harmonic Poems

- Harmonic Poems is a platform for poets to share their poems and inspire young poets. This platforms aims to be
- a Harmonic Poets Community, where poets can like, comment and share their poems with the world

5:Deepfake Detection System

- A deepfake detection system using a combination of ResNext (for spatial feature extraction) and LSTM (for temporal analysis) models. The system includes a Django web interface with live camera detection functionality.

EDUCATION

National College Of Business

Administration And Ec

Bachelor's Degree in computer science
2014 – 2018

PROFESSIONAL EXPERIENCE

Python django developer

createcodes.co | 2023 -

Present

- Integrated third-party services such as payment gateways into existing applications using API calls from Python and Django code base. Implemented RESTful APIs to allow integration between different systems within the organization. Resolved issues related to bugs and performance optimization for Python-Django based applications. Participated in daily standups to discuss progress of ongoing projects with other members of the development team. Assisted with the implementation of features in an existing Django application.

- Designed RESTful APIs with token-based authentication (JWT/ OAuth) for secure user access and data handling.

React.js Developer | Front-End

Development | JavaScript, HTML,

CSS | 6 Months Experience

createcodes.co | 2025 - Present

Laravel | Web Developer Internship

Optimum Tech | Software Company | 2022

- Implemented user authentication using OAuth 2.0 protocols
- Debugged existing web applications for compatibility with different browsers and devices.

LANGUAGE

- Urdu
- English

PROJECTS

6:Daisy World model from NetLogo.

- Black daisies have low albedo (absorb more heat)
- White daisies have high albedo (reflect more heat)
- The system demonstrates homeostasis as daisy populations regulate global temperature

7:PowerPoint to Word Converter

- Convert PowerPoint headings to Word headings
- Preserve text content
- Convert tables, embedded objects, and other non-text elements to screenshots
- Handle multiple files in a structured way

7:Face-analysis-main

- The project aims to identify and differentiate between faces in uploaded images.
- It likely utilizes machine learning techniques or pre-trained models to recognize faces.
- Users can upload images, and the system will analyze and identify the faces present.

9:Cyber Space

- Developed a backend system in Django + DRF to manage domain and subdomain registration, including dynamic routing.
- Implemented IP address tracking and registration logic for each domain and subdomain.
- Built RESTful APIs to handle CRUD operations for domains, subdomains, and associated IPs.
- Ensured secure and scalable domain registration using token-based authentication (JWT).
- Designed database models to maintain domain-IP relationships, DNS-like records, and access logs.
- Integrated admin panel for managing domain ownership, IP bindings, and subdomain hierarchies.
